

Micra System

Elegant, relocatable glass for a spacious look with minimal profiles

Interfinish: the ultimate demountable solution

Elegant, re-locatable glass partition system for a spacious look with minimal profiles

The Micra system is available in two types of glazing (10mm or 12mm)

The slim floor profile is composed of two sections (basic plus click profile) is also used for wall connections (anodised aluminium) for a quick and simple installation

The vertical connection between glass elements is created with a transparent X-shaped PVC profile.

This profile is pressed into the grooves in the glazing edge guaranteeing a stable and elegant connection.

The specially patented vertical connection can be fitted without a messy silicon joint so that the partition, like all Interfinish systems, is totally flexible and re-locatable.

The Micra system creates a sophisticated and transparent office space. The glazed sections are not disrupted by visible profiles and the partition integrates into the office structure.

Like all Interfinish demountable partitions, Micra is a complete system that can be relocated, extended or adapted according to the need of the office.

Various solutions for doors and frames are available to complete the system (ie full height to ceiling or doorframes with glazed over-panels). Doors are available in safety glass or timber options.
